

Indexer lubrication

Oil lubrication

The indexer is supplied with the synthetic lubricating oil **Klübersynth GHE 6 - 460** as standard. It is lubricated for life and, accordingly, an oil change should only be carried out if the condition of the oil changes significantly compared to the original condition. The oil level should be checked at regular intervals. It is sufficient if oil is visible in the sight glass when the indexer is at a standstill. This ensures the lubrication of cam followers and cam.

At speeds below 150 rpm	At speeds higher 150 rpm
Klübersynth GHE 6 - 460	Klübersynth GHE 6 - 100
Mobile Glygoyle HE 460 [ISO V6 460]	Mobile Glygoyle 22 [ISO V6 150]
Shell Omala S4 WE 460	Shell Omala S4 WE 150

Attention

Never mix different types of oil!

Attention

Only top up the lubricant mentioned above!

When filled with food oil NSF H1 registered - in accordance with FDA 21 CFR § 178.3570, the gear unit is delivered with **Klübersynth UH1 6 - 460**.
